Office Action Summary

Art Unit: 2829

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 19 and 20, drawn to an array of memory cells and a test circuit, classified in class 324, subclass 765.
- II. Claims 21-45, drawn to an array of memory cells and a substrate voltage regulator, classified in class 365, subclass 189.09.

The inventions are distinct, each from the other because:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require all the details of the subcombination. The subcombination has separate utility such as by itself for its intended purpose or in a different combination.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2829

A telephone call was made to The Office of the Attorney of Record on May 17, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.
